

AMANDA – A Materials Acceleration Platform for solution processed semiconductor research

Dr. Jens Hauch / Dr. Misha Sytnik

Helmholtz Institute Erlangen-Nürnberg / Forschungszentrum Jülich

08.02.22 ||| Jens Hauch ||| High Throughput Methods in Photovoltaics

part of

in cooperation with

What we do....

Photovoltaics

Core Competencies

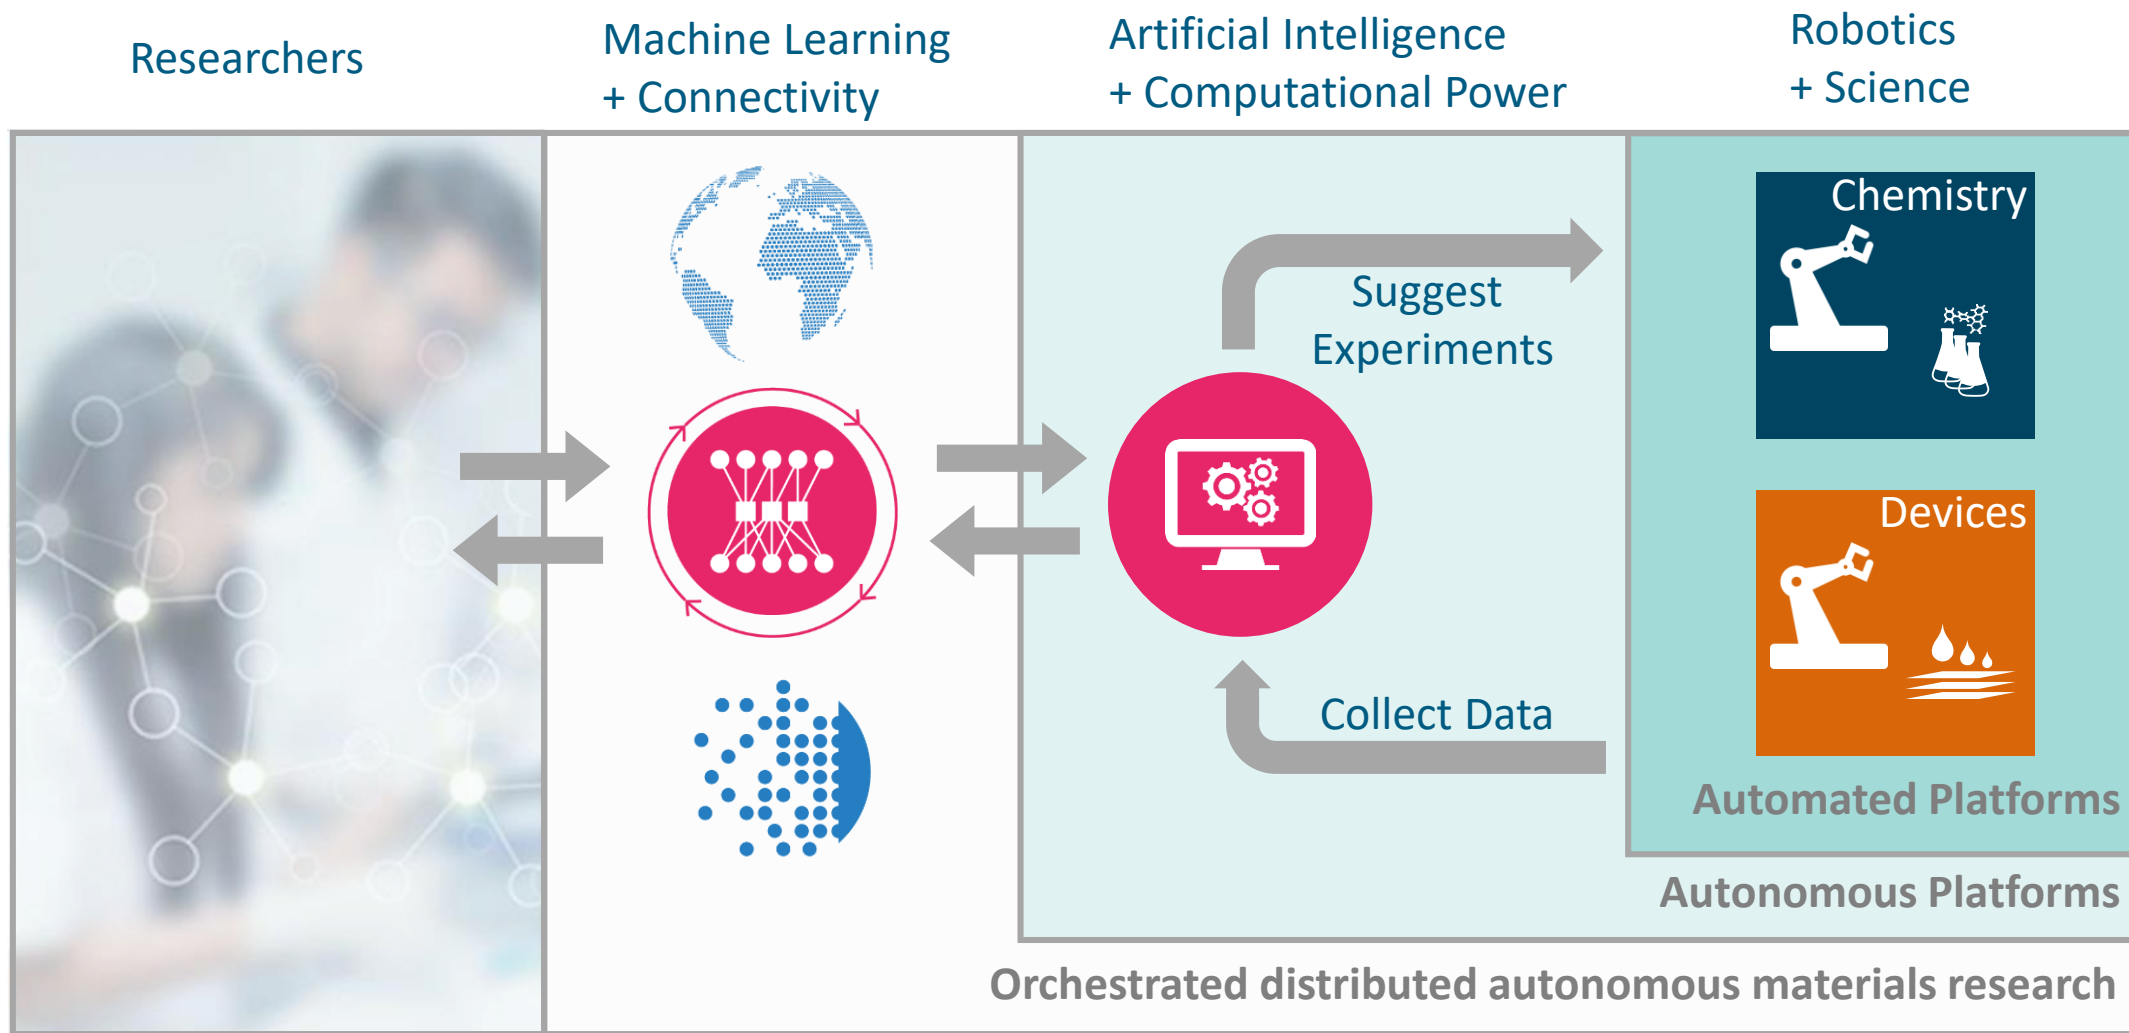

- Physics of Photovoltaics
- PV-Systems & Failure mechanisms
- Materials Science & Development
- Solution processable Semiconductors
- Imaging IR Methods

Big Data

Big Data Methods

- Automation & Robotics
- Artificial Intelligence & Machine Learning
- Data Bases
- FAIR Data

Virtual Access Platform for Materials Discovery

➔ 10x Acceleration of the discovery of complex functional materials

Synthesis and Ink Formulation

Automated Pipetting System and Spectrometer => Synthesis and Drop-casting

Heater/
shaker

4 Pipette
Channels

UV-Vis
/PL

Sample
holder

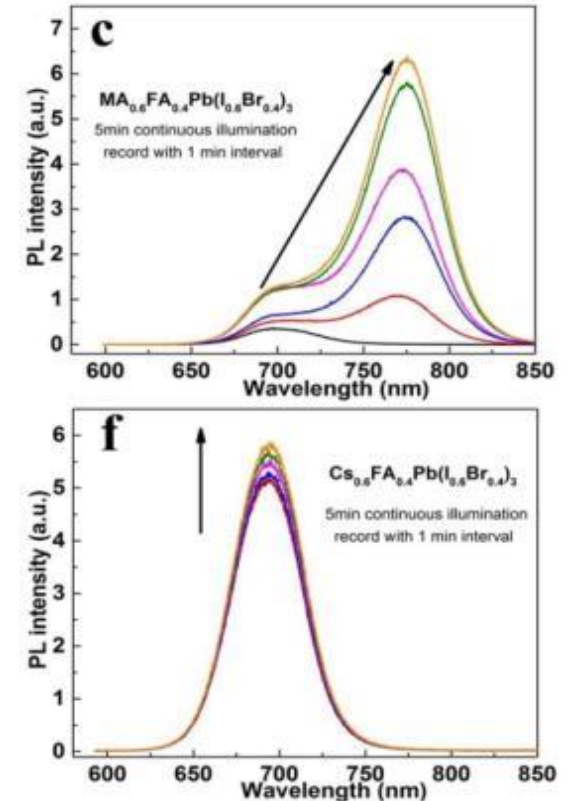

Master
solutions

Automated Synthesis and Characterization of Perovskites

ADVANCED ENERGY MATERIALS

- Synthesis in 96-Well-Plates
- Charakterization in solution

Automated Screening of Antisolvents for P Joule

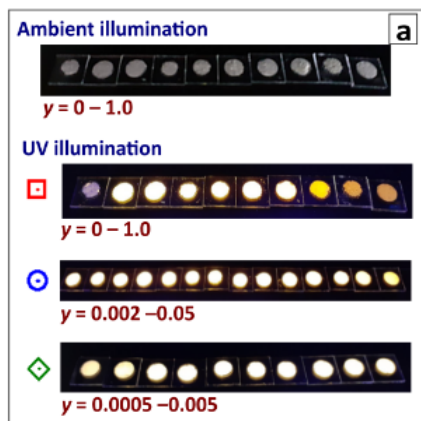

- Utilization of an automated platform for solvent engineering
- Combination of measurements and simulation
- Determination of Hansen Parameters to determine solvent space
- Creation of antisolvent database

Synthesis of CANBIC lead-free perovskites

- Low temperature automated synthesis $\text{Cs}_2\text{Ag}_x\text{Na}_{1-x}\text{Bi}_y\text{In}_{1-y}\text{Cl}_6$ (CANBIC) lead-free PSKs
- Variation of Bi content by 4 orders of magnitude
- Discovery of $\sim 100\%$ PLQY
- Charge carrier lifetimes of up $2\mu\text{s}$

LineOne – An autonomous fabrication line for solution based solar cells

Features

- Fully automated OPV manufacturing and characterization including:
 - Solution preparation
 - Spin coating
 - Thermal annealing
 - Thermal evaporation
 - Optical absorption measurement
 - Electrical characterization
 - Accelerated lifetime testing
- Operating in inert atmosphere
- High flexibility in process design
- In-line ML integration

Spinbot – A Fully Automated Spin Coating Setup

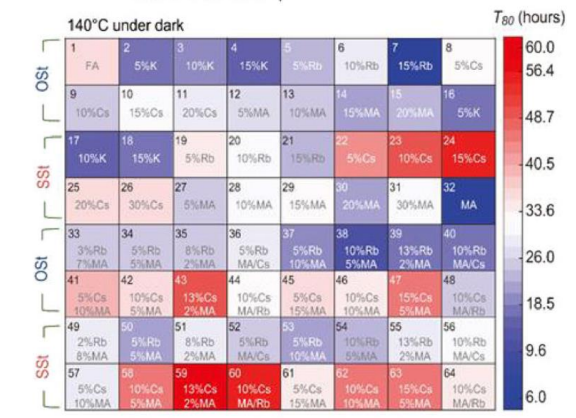

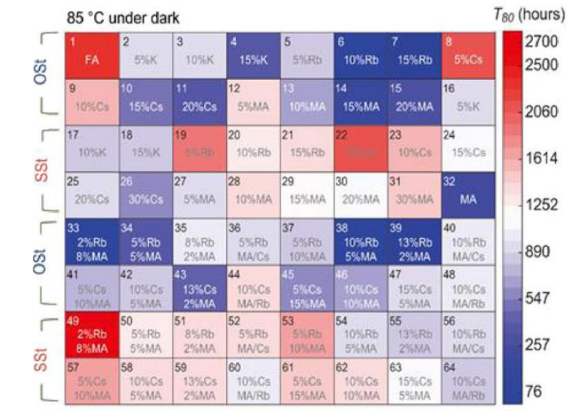

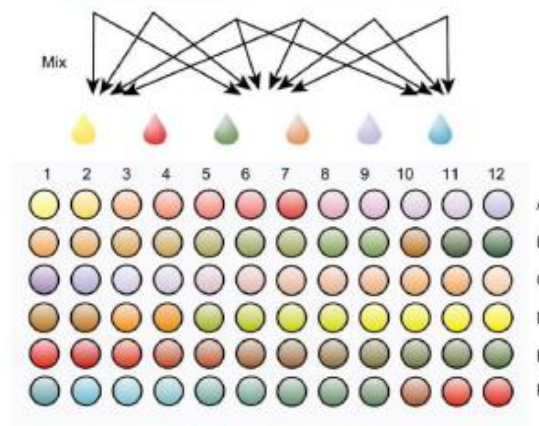

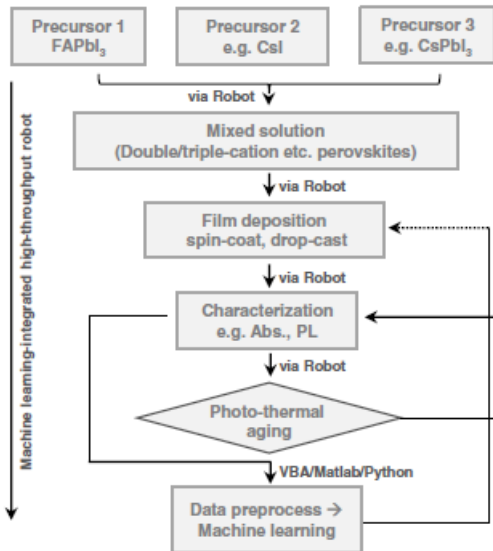

Scara-Robot (1), Gripper (2), pipetting channel (3)

Features

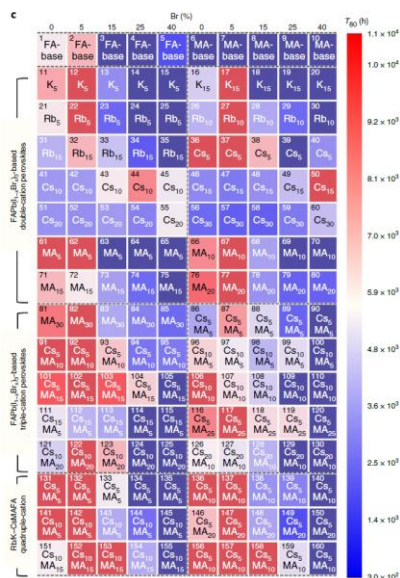

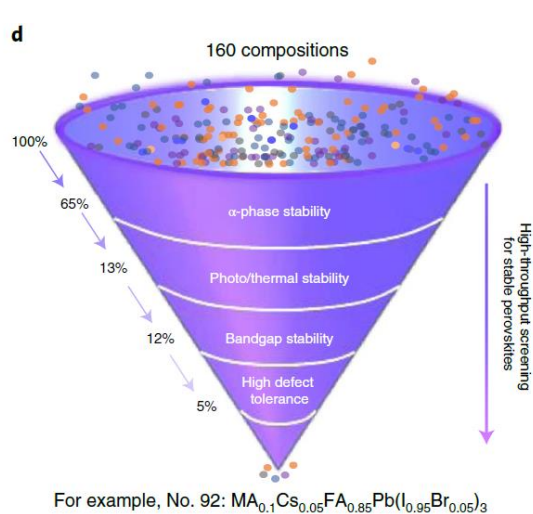

- Sample transport
- Pipetting
- Spincoating
- Thermal annealing

HT Investigation of PSK-Stability

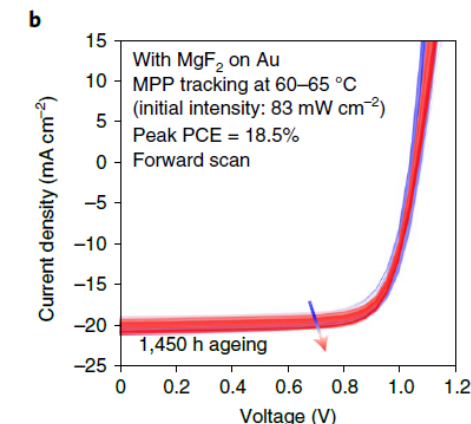

- Testing the effect of various cations of device stability at various temperatures
- Discovery of „stability reversal“ for several compositions

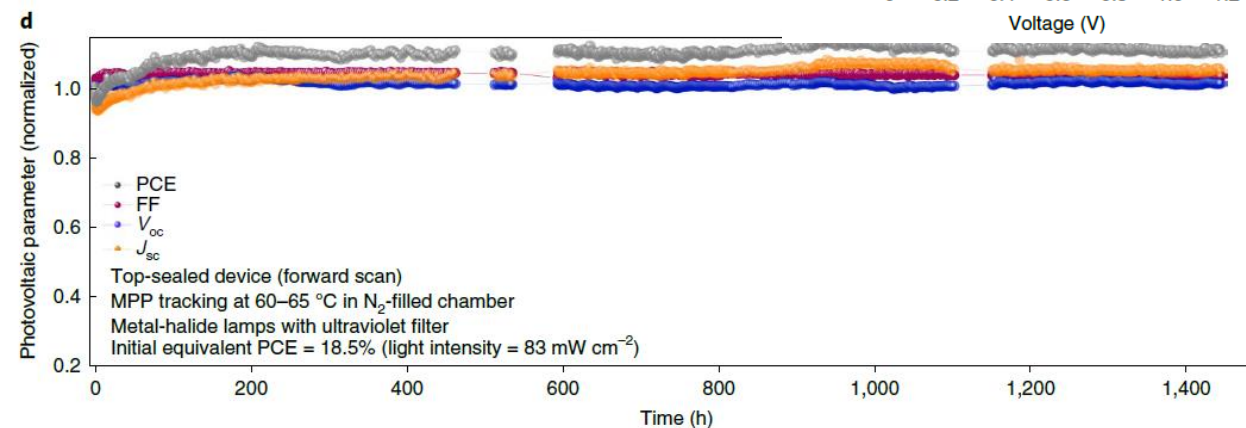

Ultrastable Perovskite Solar Cells with 1400hrs stability

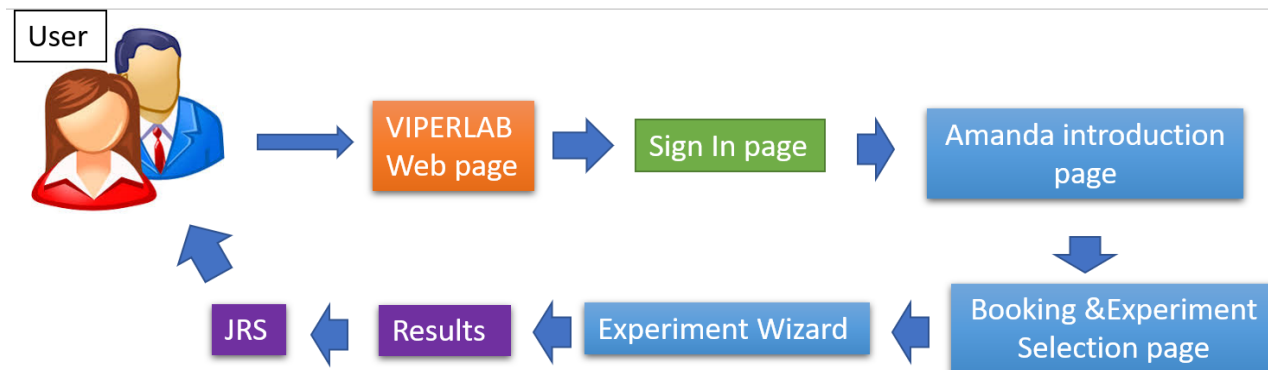

- Stability screening of 160 mixed cation, mixed halide perovskites
- Novel bilayer polymer hole transport layer
- Stabilized top electrode

- More than 1400hrs operational stability @65°C/0.8suns
- No hysteresis
